

ORDER NOTIFICATIONS

How to show that customers are told when their order changes: on the order page, with their own preferences, and as a phone or computer notification even with the site closed.

WHAT YOU'RE SHOWING

READY

1 · ON-SITE ALERTS

Pop-up, chime and a "(1) Ready" tab title while the order page is open.

READY

2 · PREFERENCES

The customer chooses what they're told about. Cancellations are always sent.

NEEDS SERVER

3 · BROWSER PUSH

A system notification even with every Hiatus tab closed.

All three run on one rule: **Ready** follows "Ready for pickup"; **accepted / making** follow "Order progress"; **collected** never alerts; **cancelled** always alerts.

SETUP

You need

- ☐ The Express server (`server` folder) and this app both running.
- ☐ `.env.local` copied from `.env.local.example`, with `JWT_SECRET` matching `server/.env`.
- ☐ Two accounts: one **customer** and one **staff**.
- ☐ For Demo 3 only: the server routes from `docs/push-notifications-backend.md`, and `NEXT_PUBLIC_PUSH_ENABLED=true` in `.env.local` (restart `npm run dev` after changing it).

Start everything

- Terminal 1: `cd server`, then `npm run dev`
- Terminal 2: `cd HIATUS`, then `npm run dev`
- Open `http://localhost:3000`

Arrange the screen

- Customer**: a normal Chrome window, logged in as the customer.
- Staff**: a Chrome **Incognito** window (Ctrl+Shift+N), logged in as staff. Separate windows keep the two logins apart.
- Place them side by side and turn the volume up.

DEMO 1 - ON-SITE ALERTS

Shows the customer being told on the page itself, and from another tab.

	WHO	DO	AUDIENCE SEES
1	Customer	Order a drink and open its order page.	Status Received , progress bar, wait estimate.
2	Customer	Click once anywhere on the page.	Nothing. Browsers only allow sound after a click.
3	Staff	Queue → Start making on that order.	Within ~20 s: pop-up " Order #...: Preparing " and a chime.
4	Customer	Switch to another tab (e.g. YouTube).	—
5	Staff	Mark ready.	The Hiatus tab title becomes " (1) Ready for pickup · Order #... ".
6	Customer	Click back into the Hiatus tab.	The "Ready for pickup" pop-up; the title resets.

Alerts can take up to **20 seconds**: that's how often the order page checks. Use the pause to explain what is happening.

DEMO 2 - PREFERENCES

Shows the customer controlling what they're told about.

	WHO	DO	AUDIENCE SEES
1	Customer	On an active order, click Manage notifications .	Profile opens at the Notifications panel.
2	Customer	Walk through the panel.	What to tell you about and How we tell you ; email marked "Coming soon".
3	Customer	Untick Ready for pickup → Save preferences .	"Preferences saved."
4	Customer	Place a new order and open it.	—
5	Staff	Start making, then Mark ready .	The page updates to Ready with no pop-up .
6	Staff	Cancel another of the customer's orders.	The Cancelled alert still appears. Point to the panel's line: "If we ever have to cancel your order, we always tell you."

DEMO 3 - BROWSER PUSH

Shows a notification arriving with the site closed. Needs the server routes and

`NEXT_PUBLIC_PUSH_ENABLED=true`.

	WHO	DO	AUDIENCE SEES
1	Customer	Profile → Notifications → Turn on , then Allow in the browser prompt.	"Notifications are on for this device."
2	Customer	Send a test.	A system notification in the Windows corner.
3	Customer	Order a drink, then close every Hiatus tab in that window.	No Hiatus page open anywhere.
4	Staff	Start making, then Mark ready.	About 1 s later: " Order #...: Ready for pickup " as a system notification.
5	Customer	Click the notification.	The order page opens.

Worth saying: on Android this works with Chrome closed; on iPhone it works once Hiatus is added to the Home Screen (Share → Add to Home Screen).

BEFORE YOU PRESENT

- ☐ Windows Settings → System → Notifications: **Chrome allowed** and **Do not disturb off**.
- ☐ Volume up; click once on the customer page so the chime can play.
- ☐ Both accounts logged in, in separate windows (normal + Incognito).
- ☐ Do one full rehearsal, so the first compile of each page is out of the way (first loads are slow in `npm run dev`).
- ☐ For Demo 3: notifications already allowed for `localhost:3000`, and a test notification sent successfully.
- ☐ Reset preferences to both ticked before starting Demo 1.

IF SOMETHING GOES WRONG

PROBLEM	FIX
No pop-up after staff changes the status	Wait the full 20 s. Check "Order progress" / "Ready for pickup" are ticked on the profile.
Pop-up but no sound	Click once on the customer page first; check the volume and that the tab isn't muted.
Profile says browser notifications "Coming soon"	<code>NEXT_PUBLIC_PUSH_ENABLED</code> isn't <code>true</code> . Set it and restart <code>npm run dev</code> .
"Turn on" shows an error	The server doesn't have the push routes yet (<code>docs/push-notifications-backend.md</code>).
Profile says notifications are blocked	Click the icon left of the address bar → Notifications → Allow, then reload.
Test sent, nothing appears	Windows Do not disturb / Focus is on, or Chrome notifications are off in Windows settings.
Can't log in at all	<code>JWT_SECRET</code> in <code>.env.local</code> doesn't match <code>server/.env</code> , or the server isn't running.
